Finishing & Veredelung

Etiketten Labels

Our editorial staff is preparing the following focus topics:

Prepress

(Workflow Solutions, Imagesetter, Colour Management)

→ Workflow integration in the printing process

Printing machine manufacturers are optimizing their printing machines, operation is becoming simpler, waste can hardly be reduced any further. But what about integration into the overall workflow? To do this, a lot of data has to be collected and incorporated into the workflow and processed. We look at the topic using the example of a software manufacturer and a printing machine manufacturer.

Printing Machines (conventional, hybrid, digital)

→ Conventional printing technology – today and in the future

Although everyone is talking about digital printing and hybrid technology at the moment, sales of conventional printing machines still predominate. We asked well-known suppliers of flexo, offset and screen printing machines what trends they identify in this area and what the future of conventional printing machines looks like.

In-mould labels and their special requirements

Inspection and control systems

(in-/offline, web guiding control, web inspection)

Substrates

(Paper, Films, Thermal Materials, Metallized Materials, etc.)

→ Paper and Climate

Printing materials based on paper fibers are subject to the climatic conditions in a print shop. Temperature, humidity, etc. cause the material to warp. We deal with the optimal conditions for use in the printing industry.

Ecology & Sustainability

→ Reporting for environment and sustainability

Currently, only larger companies classified as public interest entities are required to report sustainability-related information. But does this also apply to small and medium-sized companies? And what are the requirements? We deal with the background.

Finishing & Veredelung

Etiketten Labels

Development and chances of the packaging industry

In its latest study, the management consultancy Apenberg & Partner, Hamburg, deals with the development of the packaging industry in recent years. How is the industry doing, what is the impact of Corona and the Ukraine war and what are the prospects for the future?

Special Section Finishing & Veredelung (n° 2/2022)

In our special we devote ourselves to the latest developments in conventional and hybrid further processing and finishing of analogue and digitally printed labels.

→ Finishing & Converting – where are we today

One of the most innovative areas at the moment is the construction of machines and systems for finishing and converting. Customers are offered cutting, embossing, cold foil, hot foil, laser punching, hybrid systems and much more. We provide an overview of the current state of the art and an outlook on further developments.

→ Embossing (Cold/Hot/Hologram Foil)

→ Varnishing

→ Laminating

→ Conventional and Laser Die-Cutting
